Rich -

Please take a look at the attached example of a residential data summary from SERAS. I think all really need to work out is what we are going to include as far as (trigger levels, MCLs, secondary MCLs, DEP #s). Whatever we decide to include will be defined/explained in an attached key.

We should get this worked out no later than Monday morning - if we need to send this up the chain for approval.

I have an e-mail to Dawn (will follow-up with a call) to give her a heads-up on the status of the final data, schedule for tox review, data roll-out, etc,

Thanks - Kelley

Kelley,

Attached is a residential report. It includes all the different trigger numbers plus the EPA and DEP Primary and Secondary Drinking Water Standards. It is much easier to remove these down the line than to add them. There are currently no expressions to highlight data that is above any sort of criteria (triggers, epa, dep, etc.). These can be added and we can created different colors that mean different things, ie. over trigger level but below EPA MCL or above EPA MCL etc.

Let me know what you think.

Thanks,
